

The best plumbing leak detection system available just keeps getting better.

Plumbing leaks cost us billions in property damage every year. The FloLogic System delivers premium protection from plumbing failure damage. Only FloLogic's EverWatch™ flow-sensing technology continuously monitors in real time, 24/7/365, catching leaks as small as a drip anywhere in the plumbing supply. When detecting leaks or critically low temperatures, FloLogic automatically shuts off water to prevent damage or waste. It connects users online for app-based alerts and plumbing system oversight, giving you the ability to control it from anywhere.

Now there's a smarter way to protect property.

The **FloLogic Gateway Ecosystem** utilizes Thread wireless networking technology, setting a new standard for the next generation of smart home ecosystems. Without the need for WiFi connectivity, the Gateway Module plugs directly into a router or WiFi booster's ethernet port, ensuring signal reach. It serves as the wireless connection hub for a Gateway-enabled Connect Module, as well as our PinPoint Sensors and Remote I/O Modules.

The System-controlling Gateway Connect Module, which plugs into the FloLogic System:

- ★ Provides enhanced local control via buttons and lights without the need to have the app, and works independently of internet service (no need for a legacy Control Panel)
- ★ Shows real time water flow above or below the sensitivity setting
- ★ Allows changing between Home, Away, Water Off, Bypass, and Disable modes
- ★ Offers immediate, out-of-the-box functionality, for installation, testing, and operation
- ★ Monitors continuously, 24/7

FloLogic delivers comprehensive protection with exacting user settings to protect any property, large or small, without the risk of nuisance shutoffs. The FloLogic app allows multiple users, multi-device management, and tailored settings including automatic mode scheduling.

Each FloLogic System comes complete with:

- ★ Valve Assembly
- ★ Power Supply
- ★ Backup Battery
- ★ Communication Cable
- ★ Gateway Module
- ★ Connect Module

Available in 1", 1.5," and 2" valve sizes featuring U.S.-made cast bronze, with our best-in-class 5-year limited warranty.

With the FloLogic System with Gateway Connect, we keep making FloLogic even better. We now offer two new components that give you more options to protect your property:

FloLogic PinPoint Sensors

These wireless sensors detect presence of water from the sensor base or extension cables. Place them anywhere. They will monitor humidity, temperature, and vibration/movement, so they're perfect for environments like laundry rooms and other potentially high-risk areas not directly connected to the plumbing system. Each sensor allows instant water shutoff as a result of a leak or low temperature threshold. They can also work independently of the FloLogic valve, providing continuous monitoring and notification-only protection. Each sensor has a battery life of five to seven years.

FloLogic Remote I/O (Inputs/Outputs)

Now you can have wireless integration of appliances and systems that affect a property's plumbing system for automated, exacting protection and to allow extended water use without false alarms. They're perfect for home security system integration, providing automatic mode changes, and allowing irrigation equipment, water softening/treatment systems and pool auto fillers to operate uninterrupted. They also control hot water recirculating pumps when you're away or during a shutoff.

The best leak detection technology available is even better at protecting your property.
