

XMARK STAIR TREAD PROTECTION

The Xmark Stair Tread Protector offers consistent protection against dirt, scratches, and damage caused by construction work, renovations, or excessive foot traffic. They are constructed with 4mm thick, high-density fluted plastic and are designed with a non-slip surface for additional safety and support. The protectors are easy to cut to fit smaller-sized stairs, waterproof, and are light in weight, but do provide heavy-duty impact resistance. They lay flat, ensuring easy installation and removal. Built for durability, they can be reused across multiple projects, making them a cost-effective solution for stair protection.
